

Ignacio Suárez Ruiz

Full Stack Developer · UI/UX Design · AI Integration

Torrelodones, Madrid · igna1995@outlook.es · +34 684 304 919 · linkedin.com/in/ignacio-suarez-ruiz · github.com/ignnaaroans95 · libreos.app

PROFESSIONAL SUMMARY

Full Stack Developer who ships real products. Built and launched **Libreos.app** — a live SaaS reaching **3,000+ monthly visitors** with organic search growth — using vanilla JS, Firebase, Stripe and AI integration, with zero frameworks and zero co-founders. Combines strong frontend craft (Core Web Vitals, WCAG, SEO) with backend integrations and a product mindset. Looking for a team where ownership and continuous learning are the norm.

FEATURED PROJECT

Libreos.app — AI-Powered Book Recommender

Live SaaS · Google Play · libreos.app · Jun 2025 – Present

3,000+

monthly visitors

10,000+

books in catalogue

Live

on Google Play

- Built end-to-end with vanilla HTML5, CSS3 and JavaScript (ES6+) — modular architecture of 3,000+ lines, no frameworks, fully solo — proving ability to architect and scale without scaffolding.
- Integrated Firebase (Firestore + Auth), Stripe subscription flow with webhook handling, Wikipedia REST API and Amazon Associates API; embedded AI chatbot per book page for real-time conversation.
- Achieved 3,000+ monthly organic visitors via structured SEO strategy (semantic URLs, meta tags, structured data) validated in Google Search Console; WCAG-compliant and Core Web Vitals optimised (LCP, CLS, TBT).
- Monetised via Stripe subscription tiers and Amazon affiliate commissions; deployed on Vercel (web) and Google Play Store (Android).

Personal Portfolio — portfolio-ignacio-suarez.vercel.app

- UI/UX-focused showcase with micro-interactions, built with HTML5/CSS3/JS; SEO-optimised, deployed on Vercel.

WORK EXPERIENCE

Frontend Developer Intern — Skylink Global, Las Rozas de Madrid

November 2024 – June 2025

- Developed and maintained internal web applications with Java, HTML5, CSS3 and JavaScript (ES6+), improving page load speed by 30%.
- Refactored critical system components, increasing code maintainability by 25% and reducing technical debt.
- Applied Git version control and Agile/Scrum methodologies, cutting delivery times by 20%.
- Conducted code reviews and maintained technical documentation across all deliverables.
